DETAILED ACTION

1. Claims 1, 3-16, 18, 21, 23, and 25 have been presented for examination.

Claim 25 is newly presented.

Claims 2, 17, 19-20, 22, and 24 have been cancelled.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: claims 1, 3-16, 18, 21, 23, and 25 are considered allowable since when reading the claims in light of the specification, none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims, specifically:

The recitation in the claims 1 of "1) identifying at least one plurality of the actions within the procedure as atomically modelable with respect to multithreaded execution of the procedure as atomically modelable actions, wherein the atomically modelable actions are not subject to interruption by other threads, and 2) generating, by the computer, the at least one partial procedure summary of the procedure from the identified atomically modelable actions, wherein the at least one partial procedure summary comprises at least one state pair, wherein the at least one state pair models an initial state and a resulting state of the identified atomically modelable actions" in combination with "during continuation of the reachability analysis, at a second point in the reachability analysis, reaching the procedure a second time; and wherein if an initial state of the procedure reached the second time is the same as the initial state of the at least one partial procedure summary, then the resulting state of the at least one partial procedure summary is used as a state of the procedure in the reachability analysis." See Tables 5 and 6 of the specification of the instant application.

The recitation in claim 11 of "based on the analyzing, the computer generating a plurality of partial procedure summaries for the multithreaded software, the plurality of partial procedure summaries comprising respective start and end actions for the determined actions executable atomically; and during the reachability analysis, again reaching the procedure at a second point in the reachability analysis and reusing the plurality of partial procedure summaries to determine actions executable atomically." See Tables 5 and 6 of the specification of the instant application.

The recitation in claim 15 of "the partial procedure summaries comprising the start and end states of sets of actions within the procedures, the actions atomically modelable with respect to multithreaded execution of the software in that the atomically modelable actions will all be performed within a single procedure by a same thread;

and a reachability analyzer operable to employ, upon reaching the sets of actions at least a second time during a reachability analysis, one or more of the partial procedure summaries instead of the sets of actions to generate modeled states of the software.” See Tables 5 and 6 of the specification of the instant application.

The recitation in claim 25 of “identifying at least one plurality of the actions within the procedure as atomically modelable with respect to multithreaded execution of the procedure as atomically modelable actions, wherein the atomically modelable actions are not subject to interruption by other threads, wherein the identifying comprises identifying a sequence of the actions within the procedure having one or more right movers followed by an atomic action followed by one or more left movers, the identifying further comprising identifying a transaction boundary within the plurality of actions using a phase variable, the phase variable indicating whether a thread is modeled as executing at least one of the one or more left movers of the identified sequence of actions or at least one of the one or more right movers of the identified sequence of actions” in combination with “during continuation of the reachability analysis, at a second point in the reachability analysis, reaching the procedure a second time; and wherein if an initial state of the procedure reached the second time is the same as the initial state of the at least one partial procedure summary, then the resulting state is used as a procedure state in the reachability analysis.” See Tables 5 and 6 of the specification of the instant application.

The claims are rendered statutory since they require a particular machine to execute the partial procedure summaries and reachability analysis. See Figure 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
